EDUCATION

University of California, Berkeley Berkeley, CA
B.S. Electrical Engineering & Computer Science Expected May 2029
GPA: 3.82 • Coursework: Data Structures & Algorithms, Machine Structures, Discrete Math

EXPERIENCE

Teserac AI Sunnyvale, CA
Software for datacenter operations.

Software Engineer (Part-Time) Mar.–May 2026; Aug. 2026–Present

- Built the internal admin portal as primary engineer (React/TypeScript, Django), used daily by 15+ staff for support, tenant provisioning, and AI configuration; deployed on ECS Fargate with Terraform.
- Built audit-logged support impersonation with single-use sign-in links on PostgreSQL row-level security, ending staff accounts inside customer organizations.
- Doubled API throughput and cut p95 latency from 9.3 s to 4.0 s under load by fixing the six slowest paths from a backend performance audit (N+1 queries, query planning, worker cold starts).

Software Engineering Intern May–Aug. 2026

- Made 1,000-component datacenter power diagrams load 15× faster (1,886 ms → 125 ms) by caching layout positions; sped up uncached loads 4.5×.
- Rebuilt organization deletion as a staged, resumable Celery pipeline so large tenants no longer time out or lock tables, pacing millions of operations to hold database CPU at or below ∼40%.
- Replaced per-tenant, per-environment SAML with shared Microsoft SSO and email-based tenant routing; merged three account-provisioning flows into one Keycloak/OIDC endpoint.

PROJECTS

CrisisTwin — Wildfire Response Simulator (Cal Hacks 13.0) Oct. 2026

- Built a wildfire digital twin with two teammates, coupling physics-based (Rothermel) fire spread on real terrain with evacuation and traffic models to score an AI commander against a no-action baseline.
- Designed the Claude commander to act only through one server-validated tool, so deterministic models, not the LLM, produce every number; added prompt caching, Atlas Vector Search, and evals.

Doodlr — AI Tutoring Platform May 2026–Present

- Built a LiveKit/Deepgram AI tutor that sketches and explains aloud on top of a student's whiteboard work.
- Wrote Django APIs for LiveKit session access and recording; deployed on ECS Fargate with Terraform.

Duedi — Real Estate Due Diligence Jul. 2026–Present

- Built a React and Django platform that cites the source passage behind every due-diligence finding.
- Designed a LangGraph workflow that gathers cross-document evidence per concern, checks quotes against OCR text, and flags risks as unresolved when evidence conflicts or is incomplete.

AI Marketing Data Pipeline Dec. 2025–May 2026

- Sold an LLM pipeline that turns roofing job videos into marketing scripts to one customer at $650/month.

SKILLS

Languages: Python, TypeScript, Kotlin, Java, C, SQL
Backend & Data: Django REST Framework, FastAPI, LangGraph, Celery, PostgreSQL, Redis
Frontend & Mobile: React, React Native
Infrastructure & Testing: Docker, AWS, Terraform, GitHub Actions, pytest
