EDUCATION

University of California, Berkeley Berkeley, CA
B.S. Electrical Engineering & Computer Science Expected May 2029
GPA: 3.82 • Coursework: Data Structures & Algorithms, Machine Structures, Discrete Math

EXPERIENCE

Teserac AI Sunnyvale, CA
Software for datacenter operations.

Software Engineer (Part-Time) Mar.–May 2026; Aug. 2026–Present

- Built Teserac's internal superadmin portal as primary engineer using React/TypeScript and Django, centralizing support, tenant provisioning, and AI configuration across four environments; deployed on ECS Fargate with Terraform.
- Designed customer-support impersonation with single-use sign-in links, organization-scoped sessions, and access controls across HTTP, WebSockets, and AI-agent calls, backed by PostgreSQL row-level security and audit logging.
- Shipped a React Native field app to 10 internal users via TestFlight, implementing interruptible voice responses and shared authentication across web and mobile.

Software Engineering Intern May–Aug. 2026

- Cut combined layout-computation and API-response time for 1,000-component datacenter power diagrams from 1,886 ms to 125 ms through position caching; sped up uncached requests by 4.5×.
- Batched and paced millions of database operations during organization deletions, keeping database CPU at roughly 40% or below to preserve capacity for other services.
- Replaced per-tenant, per-environment SAML setup with shared Microsoft SSO and email-based tenant routing; unified three account-provisioning workflows into one endpoint using Keycloak/OIDC.

PROJECTS

Doodlr — AI Tutoring Platform May 2026–Present

- Built a LiveKit/Deepgram AI tutor that pairs streamed drawing updates with spoken explanations and uses students' existing whiteboard work as context.
- Built Django APIs for LiveKit session access and recording, and provisioned AWS infrastructure with Terraform to deploy containerized services on ECS Fargate.

Duedi — Real Estate Due Diligence Jul. 2026–Present

- Built a property document analysis platform that links report findings to source passages; deployed the React/TypeScript and Django application on AWS.
- Implemented a LangGraph workflow that retrieves cross-document evidence for each concern, validates quotes against OCR text, and retains unresolved risks when evidence is conflicting or incomplete.

AI Marketing Data Pipeline Dec. 2025–May 2026

- Built a service that converted roofing job photos and videos into marketing scripts using FFmpeg, Deepgram, and LLMs; earned $650/month from one paying customer while active.

SKILLS

Languages: Python, TypeScript, Kotlin, Java, C, SQL

Backend & Data: Django REST Framework, FastAPI, LangGraph, Celery, PostgreSQL, Redis

Frontend & Mobile: React, React Native

Infrastructure & Testing: Docker, AWS, Terraform, GitHub Actions, pytest
